EDUCATION

Bucharest, Romania	University of Bucharest	Oct 2012 - Present
---------------------------	--------------------------------	---------------------------

- Studying Bachelors of Computer Science.

OPEN SOURCE CONTRIBUTIONS

-
- Most notably in the Node.js, Meteor and Famo.us ecosystems. Examples include:
 - helping with the [Discover Meteor translation effort](#);
 - fixing a broken package installation for the [Homebrew package manager](#);
 - filing a bug for the pre-release version of the [Roots static build system](#);
 - maintaining a simple one-liner [Meteor + Heroku europe deploy script](#).
 - I try not to let a day pass without pushing something to Github. Projects include:
 - a reimagined presentation of [Isaac Asimov's The Last Question](#);
 - experiments integrating Famo.us with [Meteor](#) or [Angular.js](#);
 - a command-line [turing machine interpreter](#) distributed through RubyGems.
 - a Meteor + Three.js 3D [browser-based MMO](#) (Romanian repo, and unfinished).

EMPLOYMENT

Software Engineer	ReadForward LLC	March 2013 - Present
--------------------------	------------------------	-----------------------------

LearnForwardAuthor (<https://github.com/learnfwd/lfa>)

- Built an open source, command-line build tool made with Node.js and distributed through npm. It provides a workflow for generating digital textbooks, implemented as responsive static single-page applications, and is used by developers in the team to produce content for our real-time classroom system.
- Authored both the build tool which converts Jade, Stylus and JavaScript into source material for the frontend, and the Bootstrap + Backbone frontend which presents the content and augments it with static site searching, note-taking, and dynamic quiz exercises that store results locally.
- Set up a complete development workflow based on Vagrant, Grunt, Mocha behaviour testing, PhantomCSS visual regression testing, and JSHint linting.

LearnForward (<http://learnfwd.com/>)

- Real time, cross-device class management application that enables Google Docs-like collaboration between teachers and students. Meteor.js framework.
- Wrote frontend modules for quiz-type exercises, built and improved upon the Bootstrap 3 based user interface by implementing modern paradigms such as off-canvas navigation or parallax scrolling, and fixed cross-browser compatibility issues.

George Enescu Festival (<http://festivalenescu.ro/>)

- Modern rewrite of the George Enescu festival website; responsive design, cloud infrastructure (Heroku, AWS), Bootstrap 2, SASS, PostgreSQL.
- Single-handedly transitioned the PHP/Typo3 project to Ruby on Rails

(RefineryCMS), importing old pages and assets and adding new features. Implemented a modern frontend with a mobile-friendly SPA-like experience via PJAX and Rails turbolinks, as well as a JSON API for the native iOS/Android app.

- Deployed the application on modern PaaS infrastructure with a separate staging server. Used load testing and New Relic analytics to monitor and optimize the backend through memcache-based page template caching, database query fine-tuning and asset caching.

AWARDS AND ADDITIONAL EXPERIENCE

- I made an online gradebook in 2011 (Apache + Mysql + PHP stack, Ajax, Windows Phone 7 styling) for use in my high-school, which earned me awards in a number of national application development contests:
 - **ITFest** 2011 - 1st prize;
 - **StudIT** 2012 - 3rd prize;
 - **GrepIT** 2012 - 3rd prize.
- Qualified for the national high-school Olympiads in English and Computer Science four times.
- Speaker at local technology conferences. Topics: "Bitcoin", "Rapid Static Website Prototyping".
- Attended local hackathons: Hackathon.ro 2012, WOWZAPP 2012, Google Student Ambassador ACS vs FMI 2012, RaspberryHack 2013.

LANGUAGES AND TECHNOLOGIES

- **Languages:**
 - Expert knowledge of JavaScript, HTML, CSS, Jade, Stylus.
 - Good knowledge of Ruby, LESS, SASS, CoffeeScript, Bash, LaTeX, PHP.
 - Working knowledge of Java, C, C++, Python, Perl, Haskell (Yesod framework).
- **Frameworks and Libraries:**
 - Expert knowledge of jQuery, Backbone, Underscore, Roots.cx, Bootstrap.
 - Good knowledge of Node.js, Ruby on Rails, Meteor, Famo.us, Angular.js, Grunt, Gulp.
 - Working knowledge of React, Ember, ASM.js/Emscripten.
- **Tools and Services:** UNIX, Git, Github, zsh, Bitbucket, Jira, Slack, TextMate, Vim, Vagrant, Dokku, Heroku, AWS, Brew, Photoshop, Sketch.

HOBBIES AND INTERESTS

Convincing people to learn to code, lurking Hacker News, hacking robots with Lego Mindstorms. I practice electric guitar, street dancing and beatboxing.
